PROFESSIONAL SUMMARY

Final-year Computer Science undergraduate at BMS College of Engineering (CGPA 8.59) with hands-on experience building full-stack applications, REST APIs, PostgreSQL-backed systems, and AI/ML solutions. Strong in Python, JavaScript, Node.js, React, SQL and Git/GitHub, with experience in backend development, database integration, debugging, and deployment. Interested in building reliable software and exploring practical AI systems.

EDUCATION

BMS College of Engineering, Bangalore

2022 – 2026

B.E, Computer Science & Engineering (IoT, Cybersecurity & Blockchain) — CGPA: 8.59 / 10

Ashok Composite PU College, Bangalore

2020 – 2022

Senior Secondary (PCMB) — 96.8%

TECHNICAL SKILLS

Languages: Python, C, C++, JavaScript

Web & Backend: Node.js, React.js, REST APIs, HTML, CSS

Databases: PostgreSQL, SQL

Cloud and Tools: Google Cloud Platform (GCP), Git, GitHub, Docker

PROJECTS

ReachInbox — Email Scheduler : [Github](#)

React, Node.js, Express.js, PostgreSQL, Prisma, BullMQ, Redis, Ethereum Email, REST APIs, Docker

- Built a full-stack email scheduling platform for creating, managing, and processing scheduled email campaigns.
- Developed REST APIs with Node.js and Express.js, using **PostgreSQL and Prisma** to manage application and email data.
- Implemented **BullMQ and Redis** for background job processing and scheduled email delivery, and used **Ethereum Email** to test email-sending workflows.
- Implemented email status tracking for scheduled, processed, and failed emails throughout the sending workflow.

Brew & Bean — Full-Stack Coffee Shop Application: [Github](#) , [Live demo](#)

HTML5, CSS3, JavaScript, Node.js, Express.js, PostgreSQL, REST APIs

- Built a full-stack coffee shop application with user authentication, menu browsing, cart, orders and reservations.
- Developed REST APIs using Node.js and Express.js with PostgreSQL for persistent data storage.
- Deployed the application and configured the backend and database for production use.
- Integrated the React frontend with backend REST APIs to support end-to-end menu, cart, order, and reservation workflows.

X-SOC — Explainable AI-Driven Security Operations Center

Python, PostgreSQL, Streamlit, Random Forest, Isolation Forest, SHAP

- Built a real-time SOC prototype trained on 3,212 network logs covering 5 attack types: DDoS, port scan, brute force, MITM, and SQL injection.
- Used machine learning models for anomaly detection and SHAP to provide explanations for model predictions.
- Built a Streamlit dashboard for monitoring detected threats and generating automated alerts.
- Designed the detection workflow to identify suspicious network activity and provide security insights through an interactive monitoring dashboard.
